Abstract

This placeholder abstract gives the reader a compact statement of the paper's problem, method, main result, and proof route. Replace this paragraph with the actual abstract once the template is used for a real mathematical manuscript.

Volume 0 – First Major Part

First Thematic Group

0.1 Formal Environment Examples

This section demonstrates the formal environment naming convention inside the custom volume structure. Option 1 makes **SampleObject** and **SampleConclusion** read as noun phrases from the canonical PascalCase label stem. Section pointers can still use the section sign, as in §0.1.

Definition 0.1.(1) – *Sample Object* – A sample object is a placeholder mathematical item used only to show the environment heading, optional title, counter, spacing, and cross-reference form.

Notation 0.1.(1) – *Sample Notation* – For a finite list of sample objects, write $X_1, \dots, X_n$, and let $P(X_i)$ denote the placeholder property attached to X_i .

Assumption 0.1.(1) – *Sample Regularity Hypothesis* – Each X_i carries enough structure for the statement $P(X_i)$ to be evaluated inside the present section.

Theorem 0.1.(1) – *Sample Conclusion* – Under **SampleRegularityHypothesis**, the object introduced in **SampleObject** has a well-defined placeholder property.

Proof. The definition supplies the object, the notation supplies the property symbol, and the assumption supplies the condition under which the statement can be read. $\square$

0.1.1 Subsection-Level Numbering

This subsection shows the second numbering form. Environment counters restart inside the subsection, and the displayed number includes the subsection index.

Lemma 0.1.1.(1) – *Sample Supporting Step* – The placeholder property is stable under replacing one sample object by another object from the same finite list.

Proposition 0.1.1.(1) – *Sample Transfer* – The stability in **SampleSupportingStep** transfers the placeholder property from X_1 to every X_i in the list.

Corollary 0.1.1.(1) – *Sample Consequence* – Every object in the list has the placeholder property.

Principle 0.1.1.(1) – *Sample Reading Rule* – Template examples should expose the printed convention without importing the source manuscript’s subject matter.

Axiom 0.1.1.(1) – *Sample Starting Premise* – The sample list is nonempty.

Conjecture 0.1.1.(1) – *Sample Future Claim* – The same display convention remains legible when the section contains longer mathematical prose.

Example 0.1.1.(1) – *Sample Use* – The reference sequence `SampleSupportingStep` , `SampleTransfer` , and `SampleConsequence` shows the title-stem names used by the custom internal cref rule.

Remark (Section Reference Form): The local section helper prints §0.1.1; option 1 prints the same destination as § 0.1.1.

0.1.2 Surface Hybrid Reference Examples

Option 2 keeps option 1’s strict expanded title rule, then appends the exact repo shorthand when the shorthand carries route, domain, status, or symbolic face information:

`ClayTerminalWitnessClassMembershipEntry` [ClayTerminalWitnessCMEEntry.A] , `WholeSpaceClassMembershipCompletion` [R3.WholeSpaceCMCompletion.A] , and `LocalizedSkewCurrent` [LocalizedSkewCurrent.A] . It also leaves compact branch codes legible, as in `WholeSpaceSobolevTail` [Tail.Hs_R3] , `EulerMirrorSharedPackSplit` [ESM.N6] , and `ReceiverReadoutBridge` [ACT.X-Readout] .

Remark (Face Primitive References): The same rule can name witness faces without forcing them into theorem-number syntax: `PackFace` [Pack_Q] , `PartFace` [Part_{N,Q}] , and `FieldFace` [Field_{N,r,Q}] .

0.2 Second Section Title

This is placeholder body text for the second section.

Second Thematic Group

0.3 Third Section Title

This is placeholder body text for the third section.

Volume 1 – Second Major Part

Main Argument Group

1.1 Fourth Section Title

This second volume keeps the same stripped formal environment convention. **SampleSecondVolumeRule** shows that the counter follows the current volume/section address.

Principle 1.1.(1) – *Sample Second-Volume Rule* – The formal environment layer is reusable across volumes without carrying any monograph-specific labels, tooltips, or subject matter.

1.2 Fifth Section Title

This is placeholder body text for the fifth section.
